This theoretical study permits the authors to give
evidence of three very distinct stages in the phenomenon
of autoxidation; the formation of a hydroperoxide, the
decomposition of the hydroperoxide with the formation
of secondary oxidation products and, finally, the de-
composition of the latter into scission products and
polymers. These polymers are more difficult to isolate

In many scientific and technical problems it is neces-
sary to determine the magnitude and direction of the
relative deviation of various small impedances. AC
bridges with phase-sensitive detectors are usually used
for this purpose. This paper describes a new type of
circuit for the oscillator and detector unit and gives
some examples of its application. (Author)
